

Index

Page numbers followed by *e*, *f*, and *t* indicate equations, figures, and tables, respectively.

- Abou-Seida, Mohamed 257
- Anderson-Einstein suspended-load sampler 110*f*
- Arkansas River 207, 209–213, 211*f*, 212*f*
- August Klönne 55–56
- Banks, Robert 225–228
- Barbarossa, Nick 227–228, 297
- bed load 110–111, 119–120, 129*f*, 151–155, 187–188. *See also* sediment problems; sediment transport; bed-load transport equation 121; deviant data 121–122; measuring bed-sediment load in the Missouri River 201–207; mobile lab 128*f*; Mountain Creek 126–128, 127*f*; nonuniform sediment 122; technical paper published 122–125; water-flow force estimation 120–121
- Berkeley: bed load model development 187–188; Einstein family adaptation to 183; growth of hydraulics division 180–181; hydraulic experimentation 178–179; move to 170, 175–176; retirement from Berkeley 281–282, 282*f*; river and water flow processes 181*f*, 182*f*; teaching position 168–170, 176; tenure 177
- Bondurant, Donald 166
- Brown, Carl 150, 162, 167, 168
- California Institute of Technology 136. *See also* Pasadena
- Caltech. *See* California Institute of Technology
- Caltech Hydrodynamics Laboratory 148–149
- career choice 33–35
- carrying the Einstein name 269–270, 270*f*
- Chien, Ning 229–232
- classical music interest 271–272

- cohesive sediments 250–251
- Colorado River 131
- computer-based modeling 295–296
- Cooperative Hydraulics
 - Laboratory 144–145, 145*f*
- correspondence with Albert 30–31, 90–91, 170–172, 176, 217–219, 221–223
- Das, Madan 257
- death 286–287, 287*f*
- early life 11–14, 12*f*, 13*f*
- education 29–31, 32–34, 34*f*, 35–36
- Einstein, Albert 15–16, 234*f*;
 - academic career 22–24;
 - correspondence with Hans Albert 30–31, 90–91, 170–172, 176; death of 234; failing health 233; letters to Hans Albert 217–219, 221–223;
 - political tensions 60–61;
 - relationship with sons 32*f*, 47–48; role in Hans Albert's career 62
- Einstein, Bernhard 113–114, 185–186, 274
- Einstein, David 114
- Einstein, Eduard 23*f*; brothers'
 - relationship 31; death of 221;
 - life after mother's death 220–221; mental illness 68–70, 116
- Einstein, Elizabeth. *See* Roboz, Elizabeth
- Einstein, Evelyn 273–274, 274
- Einstein, Frieda 264*f*; death of 265;
 - decline of 263–264;
 - hysterectomy 141–142; life in Berkeley 184–185
- Einstein, Klaus 113–114
- Einstein, Mileva 16–17; concerns
 - about care for Eduard 220; death of 218; personal safety 115–116; visit from Hans Albert 155–156
- El-Samni, El-Sayed 224–225
- emotional stress 32, 37–38
- employment 57*f*, 64*f*; August Klönne 55–56; Hydraulics Research Laboratory 61–62, 63–66
- Enoree River: bed load 110–111; developing instrumentation 107–109; Enoree Sediment-Load Laboratory 106–107; map of 106*f*; sediment size distribution 109; soil conservation 103–104; wash load 110–111
- family illnesses: Albert 45; death of son David 114; death of son Klaus 114; Eduard 45–46, 68–70; Mileva 43–44
- family life 183–185
- family relations 60
- family tensions 273
- family travel 18–19, 186–187, 232–233, 264–265
- Favre, Henry 81–82
- financial issues 41–43
- First Federal Interagency Sedimentation Conference 166–168
- flow resistance 225–228
- fluid dynamics 3, 4–5
- fluid mechanics projects 149
- Fort Peck Dam 194
- graduate students: El-Sayed El-Samni 224–225; Emmanuel Partheniades 250–251; George Kalkanis 257; Hsieh Wen Shen 242; Huon Li 241–242; James Harder 253–254, 253*f*;

- Madan Das 257; Madhav Manohar 257; Mohamed Abou-Seida 257; Ning Chien 229–232; Ray Krone 249–250; Robert Banks 225–228; Walter Graf 254–255, 297
Graf, Walter 254–255, 297
- Hans Albert Einstein Award 296–297
Harder, James 253–254, 253*f*
Hathaway, Gail 194, 197
hiding factor curve 229
Hoover Dam 131
hydraulic engineering 5–7
Hydraulics Research Laboratory. *See* Laboratory for Hydraulic Research
hydrodynamic lift 224–225
- irrigation and drainage panel
discussion 243–244, 244*f*, 245*f*
- Johnson, Joe 180, 182, 255–256
- Kalkanis, George 257
Knapp, Robert 143–144
Knecht, Frieda 56–58, 58*f*. *See also* Einstein, Frieda
Krone, Ray 249–250, 297
- Laboratory for Hydraulic Research 61–62, 63–66, 64*f*
Lacey, Gerald 244, 244*f*
Lane, Emory 168*f*, 194, 196–197, 198
legacy in sediment problems 293–295
Li, Huon 241–242
- Manohar, Madhav 257
marriage 56–60; first child 59*f*;
genetic issues 57–58, 59; parental objections 57–59
- mathematical puzzles and problems 20–21, 31
Means, Thomas 194, 197
memorial service 287–288
Mississippi River 207–209
Missouri River: continued interest
in 239; irrigation and drainage panel discussion 243–244, 244*f*, 245*f*; meandering-flows studies 244–247; measuring bed-sediment load 201–207; secondary currents 241–243; single channel 240–241, 241*f*; standing waves 242; use of Einstein method for estimating sediment transport 228–229
Missouri River Division: board report 200; erosion after completion of Fort Peck Dam 194; Pick-Sloan Plan 193; river engineering practice 197–198; Sedimentation Board 194–200
motorcycle riding 67–68, 67*f*
Mountain Creek 126–128, 127*f*
move to U.S. 97–98, 104*f*, 112–113
music 19–20, 48*f*
- O'Brien, Morrough 177–179
Otwell, Herb 248, 272–273
- parental separation and divorce 24–26, 30*f*, 38–41, 46–47
parents 14–15, 17*f*
Partheniades, Emmanuel 250–251
Pasadena 140–141, 140*f*
personality 32, 49–50, 65–68
photography hobby 183, 271
post-retirement life 283–286
post-retirement tour of Europe 284–285

- professional jealousy 150
 professional travel 270–271
- recreation 66–68, 67*f*
 regime theory 230, 231, 232
 reservoir sedimentation 146–147, 147*f*
 retirement from Berkeley 281–282, 282*f*
 Rhine River 75*f*; alluvial channels 79–81; bed sediment 76–77; bed sediment movement 90–92; bed-load transport 85–89, 89*f*; dimensions and river flow 76; early research 77; flooding issues 73–74, 74*f*; flow guidance structures 78; flume testing 81–85, 81*f*; hydraulic and lab models 81–85; lab model 87*f*; Laboratory for Hydraulic Research 80*f*; river engineering and physics 79; state of river engineering 77–78
 Rio Grande River: bed aggradation 160; bureaucratic issues 164–166; channel complexity 163; development along 159–160; erosion minimization 160; First Federal Interagency Sedimentation Conference 166–168; flooding issues 164*f*; flow complexity 162–163; location of 161*f*; pre-floodway surveying 162; remediation plans 160, 162; sediment core extraction 165*f*; sediment-load complexity 162–163
 river engineering practice 197–198
 rivers 1–2, 3–4, 4*f*; Arkansas River 207, 209–213, 211*f*, 212*f*; Colorado River 131; Enoree River 103–104, 106–111, 106*f*; Mississippi River 207–209, 239; Missouri River 193–207, 228–229, 240–247, 241*f*, 244*f*, 245*f*; Rhine River 73–92, 74*f*, 75*f*, 80*f*, 81*f*, 85–89, 87*f*, 89*f*; Rio Grande River 159–160, 161*f*, 162–168, 164*f*, 165*f*; Salinas River 225–228, 226*f*, 228*f*
 Roboz, Elizabeth 142, 143, 265–266, 267*f*; life after Hans Albert's death 288–290; marriage to Hans Albert 265; personality 265–268
 Rouse equation 151–152
 Rowell, Margaret 272
- sailing 247–248, 272
 Salinas River 225–228, 226*f*, 228*f*
 San Francisco Bay 239, 247; sediment movement 248–249; suspended-clay deposits in saltwater 249–250
 seawater intrusion into freshwater 251–254
 sediment problems 145–146. *See also* bed load
 sediment transport 254–257. *See also* bed load
 Sedimentation Board 202*f*, 203*f*, 204*f*
 Shen, Hsieh Wen 242, 297
 Shields, Albert 93–94
 Soil Conservation Service 103–105; Enoree Sediment-Load Laboratory 108*f*; Greenville field station 105; Sedimentation Division 105–107
 Straub, Lorenz 194, 195–196, 198
 suspended load 152–154

- suspended-clay deposits in
 - saltwater 249–250
- suspension viscosity 132–134
- teaching style 275–277
- thesis research 73–92
- turbidity currents 130–132
- U.S. visit 94–96, 96*f*, 97*f*
- Vanoni, Vito 140, 141–143, 146*f*,
167, 169, 194, 196, 296
- von Kármán, Theodore
143–144
- wash load 110–111, 230
- Waterways Experiment Station
122
- writing difficulties 134
